

MeetingStream™ - Live Video/Audio Capture, Recording & Streaming Solution

The TeleDelta MeetingStream™ is a complete turn-key solution that provides Live Camera / Document Capture, Recording and Streaming /Viewing via a simple-to-use control solution for Council Meetings, Boardrooms, Lecture Theatres and Debating Chambers.

Designed and built in Australia, the TeleDelta MeetingStream™ allows operators to utilise one-or-more TeleDelta HD1200 series high-definition cameras and local PC/AV source to capture HD content for Live-web streaming, local recording to permanent and removable storage plus long-term archival storage of events.

Over-coming the complexities of existing AV systems – the TeleDelta MeetingStream™ provides operators a simple to navigate User-Interface providing control of cameras, pre-sets and streaming content. For more complex and pre-existing installations, the TeleDelta MeetingStream™ can integrate into third-party control systems.

The MeetingStream™ streaming output allows remote audiences to view meetings live or on-demand via a web-enabled device – including Mobile, Tablets, PCs and Smart-TVs. The integrated MeetingStream™ scheduling agent provides meeting hosts an effective way of create, schedule and invite viewers to an event.

MeetingStream™ Architects Specification

Proudly designed and built in Australia, The TeleDelta MeetingStream™ is designed for venues and facilities who require an easy to operate, yet powerful stand-alone or integrated Content Capture, Recording, Streaming and Local Viewing Solution.

The TeleDelta MeetingStream hardware consists of a 3RU Server, this Server has a single 220~240V power supply. MeetingStream server has 4x HDMI/DVI Input source connections (systems can be built with up to 16x HDMI/DVI Input along with SDI Input configurations) for HD1200 Cameras, PC/Laptop and Audio Source device inputs. The MeetingStream Server has 2x DVI/HDMI Outputs, the first for output Video Stream Monitoring and the second for Server access. MeetingStream has 2x RJ45 Connectors, the first for IP video streaming to the Internet / LAN and the second for IP management / control.

The MeetingStream front panel houses 6x High-Speed USB3.0 Ports for "Take-away" content recording post an event, the 6x USBs record simultaneously. The MeetingStream Server also has a CD/DVD drive accessible from the front panel. The MeetingStream Server dimensionally are 55x45x20cms, weight of 14kgs.

The supplied HD1200 Cameras (PN: HD1220) is a mountable PTZ camera with 12x / 20x zoom lenses. The HD1220 camera output as standard 1920x1080P full-HD via HDMI/DVI output, with options for SDI output. The HD1220 has an RJ45 (IP output) for IP management of camera presents and manual PTZ controls.

The Complete MeetingStream solution (including HD1220 cameras) is controlled from a secure web-browser address - Operators securely access this location (username / password) - from here they can, setup system parameters, control HD1220 cameras (Manually or pre-sets) and start / stop recording and streaming functions. The MeetingStream solution has been designed for an non-skilled user to operate.

MeetingStream can integrate into 3rd Party control systems with external API calls.

The MeetingStream Live Video Output is available on the "IP Video Out" RJ45 port on the back of the Server, operators can stream the video to either their own website (for viewers to watch) or to a "white-label" web-address available from TeleDelta. Operators can schedule events and advise viewers of address / time of events. Viewers are able to watch the MeetingStream event on most web-enabled devices including Mobile, Tablet, PC/Laptops and Smart TVs via the devices web-browser.
